Investigate core curriculum concepts with an interactive research tool!

Features

Take students on an interactive adventure with **A Field Trip to the Earth**. Through exciting video, photographs, and illustrations, investigate core curriculum earth science concepts such as volcanoes, earthquakes, plate tectonics, glaciers, mountain formation, and rocks and fossils.

From the *Discovery Screens* students can:

- Explore Earth's place in the solar system
- Discover rock types, the rock cycle, and fossils
- Investigate volcanoes, earthquakes, and tsunamis
- Find out about the features of oceans, mountains, and glaciers
- Learn how earth science theories have changed over time

As students view each *Discovery Screen*, they can search for hidden pictures, which, when clicked, reveal fascinating facts and more detail about the topic.

The *Field Guide* gives students the opportunity to research earth science topics in greater detail. Students can choose topics of interest, then click to read about the subject matter and see accompanying animations and illustrations. The *Field Guide* includes a glossary of definitions.

The *Media Gallery* offers additional animations, illustrations, photos, and video to help students visualize difficult concepts.

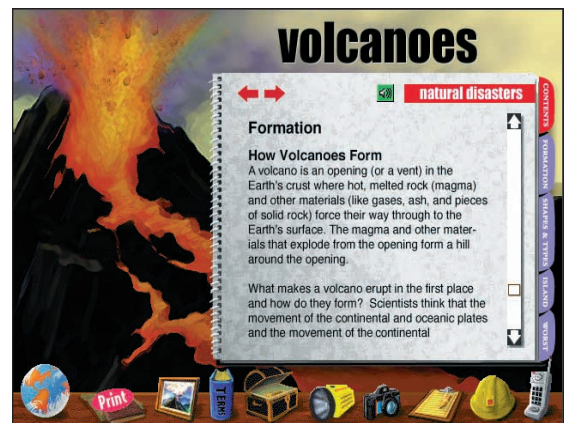

A Field Trip to the Earth includes a *Journal*, which is a complete word processor that gives students the ability to take notes and pictures that can be used for research reports.

Prices

| | |
|-------------------------|-------------------|
| Mac/Win CD | 8493DH |
| Single | \$99.95 |
| 10 Computers | \$329.95 \$99.95 |
