Features

Explore the World Beneath the Rainforest Canopy

Introduce your students to the enchanted and fragile environment of three of the world's major tropical rainforests with **A Field Trip to the Rainforest Deluxe**. Based on the award-winning *A Field Trip to the Rainforest*, this new multimedia CD-ROM features beautiful illustrations, vivid photographs, and comprehensive, age-appropriate research on core curriculum subjects.

As students take an interactive journey through the tropical rainforests of South America, Africa, and Southeast Asia, they will discover the variety of animals, insects, and plants that coexist and thrive in these ecosystems.

Discover the Wonder of the Rainforest

Your students can click on plants and animals in the *Discovery Screen* to take a closer look. They'll uncover the unique habits and unusual characteristics of exotic animals such as gibbons, tapirs, Congo peafowls, and poison arrow frogs, as well as the abundance of flourishing vegetation that includes bromeliads and strangler figs.

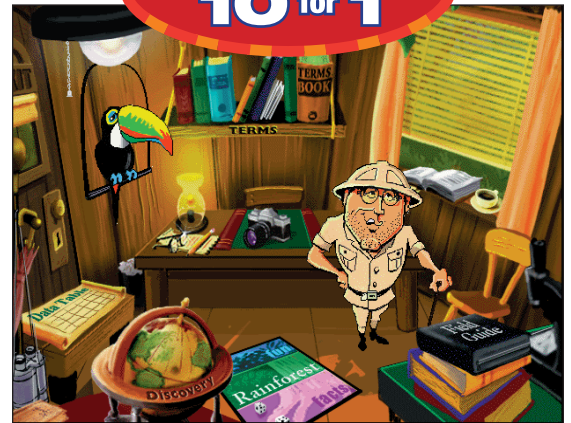

Investigate Critical Issues

The interactive on-screen *Field Guide* has sections on plants and animals, and provides a wealth of information on the climate, people, products, and future of the rainforest. Hypertext links make it easy for students to get definitions from the glossary.

Analyze Plant and Animal Information

Students can use the *Data Table* to check their observations and access information on 50 plants and over 100 animals that inhabit the three rainforests. Because students can classify, sort, and organize facts in the *Data Table*, it's also the perfect introduction to using a database.

A Field Trip to the Rainforest Deluxe also includes a *Journal*, a complete word processor where students can automatically transfer notes, text, and pictures to create reports. There's even a fun-fact activity designed to reinforce learning. Your students will enjoy discovering the mysteries and importance of the tropical rainforest with **A Field Trip to the Rainforest Deluxe**.

From the *Visitors Center*, students can easily navigate this content-rich CD-ROM.

In the *Data Table*, students sort and classify information on animals and plants of the rainforest.
