Observe, research, and discover the complexities of the ocean world!

Features

A **Field Trip to the Sea Deluxe** introduces students to the diversity of life found in marine environments. Expanded from Sunburst's original **A Field Trip into the Sea**, this interactive CD-ROM has new features that provide students with a comprehensive multimedia research adventure. Through video, photography, sound, and illustrations, students visit rocky shores, coral reefs, the ocean abyss, tide pools, and the open sea. Students hone their observation skills, conduct scientific research, and present their findings.

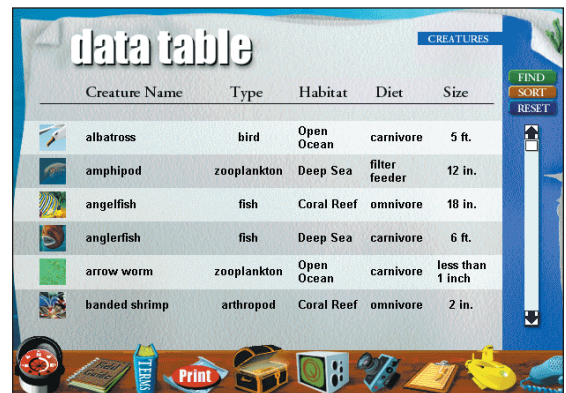

The content-rich program begins at the *Discovery Screen*, where students choose an ecosystem and begin to explore. Students also access the interactive on-screen *Field Guide* where they investigate specialized topics such as tides or adaptations. The *Data Table* further assists in research by providing information on over 50 plants and 140 animals. Here, students can create charts and databases to support their research. Finally, the *Journal* is where students record their observations and organize pictures and charts that will be used in their reports. A Search feature lets students move between sections of the program. A complete word processor is included to make this a self-contained research program.

Prices

Mac/Win CD	8983DH	
Single	\$99.95	
10 Computers	\$329.95	\$99.95
School Pack of 80	\$999.95	\$699.95
Network.....	\$999.95	\$699.95

This program is a rich research tool! Students can find comprehensive information on many different sea creatures and use the program's word processor to write reports.

The data table allows students to organize information on various sea creatures by categories.
