Features

Students discover how their five senses help them learn about the world around them! By identifying the relationship between the eyes and sight, the ears and hearing, the skin and touch, the nose and smell, and the tongue and taste, students learn how the different parts of the body send important information to the brain. Students also discover how animal sensory systems differ from our own. This program's clear descriptions, lively reviews, and three extension activities with matching, sorting, sequencing, and writing challenges will keep students engaged and excited about science as they:

- Explore nine easy-to-grasp content presentations in the *Learn Section*.
- Use an auditory support and highlighted text options to support their reading!
- Enjoy a fun review in the *Quiz Section*.
- Take notes in an on-screen notebook with printable pages.
- Participate in three additional activities that reinforce learning with matching, sorting, sequencing, and writing challenges.
- Engage in an expressive writing activity called *My Sensational Day*, where students pick their favorite tastes, sights, touches, smells, and sounds to create a perfect day.
- Visit a *Jukebox* to hear original songs based on a sensory-related theme.
- Earn attractive completion certificates.

Teachers can manage student access by pre-selecting lessons. A global management feature allows teachers to monitor student progress and review student notebooks.

Discover how the five senses help students understand the world around them!

Text is highlighted as it is read out loud.
